Projects

Tripster Travel Blog - May 2020 - Link | GitHub
PostgreSQL Database, Node.js, Express.js ESJ, oAuth2.0, Heroku
- Full-Stack web app built to share images and adventures. Users are able to upload images, create posts, comment and like other users content. Data is rendered server-side and served via Express and Node.js

myMovieBucket - May 2020 - Link | GitHub
HTML, Javascript, JSON, API, jQuery
- A single page CRUD app that allows the user to search and store movies. As well as view actors, release year, and plot synopsis, accessed through the OMDB API.

Local Dashboard - May 2020 - Link | GitHub
Javascript, Google Places API, CSS, Axios
- Built remotely in the Agile environment with a team of peer developers. The Dashboard accepts the users location and formats it through Google's API and renders local news, weather and traffic, all while remaining responsive.

BlackJack - April 2020 - Link | GitHub
HTML, CSS, Bootstrap, Javascript, JSON
- Built with functional programming, this web app deals and removes random cards from a 52 card deck. The user decides when to hit and stay.
